PROJECT

Design, Manufacture and Installation of new Car Number Indicators for the XPL Railcars

CLIENT

Xplorer/Endeavour Service Centre

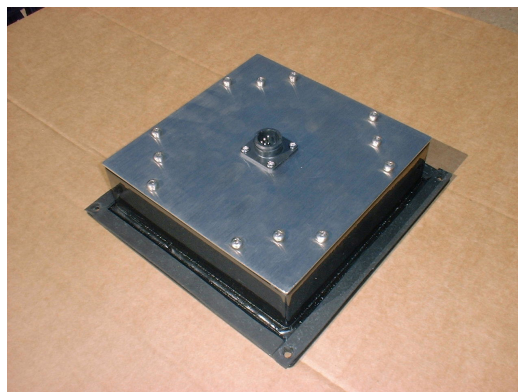

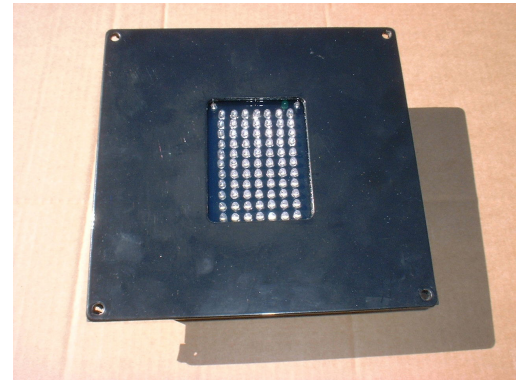

CLIENT CONTACT

Trevor Weir

DATE

September 2001

EQUIPMENT

SPECIFICATION

New indicators to be designed and built to replace the existing scroll type of indicators, which have deteriorated to such a degree that the majority of them are no longer functional.

In total, 60 units delivered..

FEATURES

- The display utilizes an array of white LEDs with an almost unlimited lifespan
- The enclosure is made of stainless steel and fully sealed at the front to prevent any water ingress.
- The displays are controlled from an internal control unit, the selected character stored in a non-volatile memory area, which means that the last selected character will always show, even if the car battery has been switched off
- The replacement of the old unit can be done on site with a minimum of disruption

OUTCOME

All units have worked flawlessly since installation.
